Re: Diamond Bar Boulevard and Brea Canyon Road (Site D) Specific Plan
General Plan Amendment 2007-01 / Specific Plan 2007-01

Dear Ms. Fong,

I am very concerned about the significant adverse effects this project will have on the environment. I'm concerned, not just for the residents of Diamond Bar who live within the 1000ft notification radius but for all residents of Diamond Bar.

You have already found and noted "that the proposed project may have a significant effect on the environment and an environmental impact report is required" and you have determined that the environmental factors for this project are aesthetics, air quality, biological resources, geology, hazardous materials, water quality, land use, noise, public services, utilities and traffic.

I am concerned that the increased traffic from the proposed 202 dwelling units and the increased traffic associated with the 153,985 gross leasable square feet of commercial use will have a significant adverse effect on the environment. We are currently experiencing major traffic congestion at Diamond Bar Blvd and Brea Canyon Road. Commuters cut through residential neighborhoods to avoid that intersection. They drive through my neighborhood. Not like one who drives through to get to their home, but like one would drive to reach that freeway on ramp. This creates a very dangerous situation. Most drivers stay on the main thoroughfare. They get to sit and wait a couple of turns before getting through the intersection. While the drivers sit in their automobiles waiting for their traffic light to change, the engines are running, idling, and the carbon emissions are at killer levels. The combustion of fuels results in the release of carbon dioxide, a common greenhouse gas that contributes to global warming. If it's a hot day, the air-conditioners are turned on potentially adding chlorofluorocarbons to the mix. It's CFC-12 often known as Freon and known to deplete the ozone.

I would like to request that a complete traffic study be completed.

I would also like to request that a complete noise study, and a geological and soil study be conducted. The level of noise that this project would subject us to would be unbearable. As it is, the noise level is very high.

I would like to request that the City honor the Walnut Valley Unified School District's Public Hearing Report regarding Site D (March 4, 1991 and March 11, 1991). Prepared by the Property Advisory Committee. The Board of Trustees appointed this committee and it was found that the community's preference was for having a park developed. The Report also indicated that leaving Site "D" in its natural state would be tolerated. Extremely minimal tolerance was shown for housing.

I am asking that Site "D" remain in its natural state, or be made a public park with potential for sports facilities. Another alternative, which is something that this community could use, is a type of adult/senior living facility. In the fashion of Leisure World in Seal Beach. Built in a park like setting. Perhaps building it around the existing trees. Single story units for the golden boomers who don't need their large homes now that their families are on their own, but who want to stay in the area.

Sincerely,

Signature

Prepared by the Property Advisory Committee. The Board of Trustees appointed this committee and it was found that the community's preference was for having a park developed. The Report also indicated that leaving Site "D" in its natural state would be tolerated. Extremely minimal tolerance was shown for housing.

I am asking that Site "D" remain in its natural state, or be made a public park with potential for sports facilities.

Sincerely,

Signature

Re: Diamond Bar Boulevard and Brea Canyon Road (Site D) Specific Plan
General Plan Amendment 2007-01 / Specific Plan 2007-01

Dear Ms. Fong,

I am very concerned about the significant adverse effects this project will have on the environment.

You have already found and noted “that the proposed project may have a significant effect on the environment and an environmental impact report is required” and you have determined that the environmental factors for this project are aesthetics, air quality, biological resources, geology, hazardous materials, water quality, land use, noise, public services, utilities and traffic.

I am concerned that the increased traffic from the proposed 202 dwelling units and the increased traffic associated with the 153,985 gross leasable square feet of commercial use would have a significant adverse effect on the environment. We are currently experiencing major traffic congestion at Diamond Bar Blvd and Brea Canyon Road. We have people cutting through the residential neighborhoods to avoid that intersection. It takes too long to get through that intersection. While the automobiles sit there waiting for the traffic light to change the engines are idling and the carbon emissions are at killer levels. The combustion of fuels results in the release of carbon dioxide, a common greenhouse gas that contributes to global warming. I would like to request that a complete traffic study be completed.

I would also like to request that a complete noise study, and a geological and soil study be conducted. The level of noise that this project would subject us to would be unbearable. As it is, the noise level is very high.

I would like to request that the City honor the Walnut Valley Unified School District's Public Hearing Report regarding Site D (March 4, 1991 and March 11, 1991). Prepared by the Property Advisory Committee. The Board of Trustees appointed this committee and it was found that the community's preference was for having a park developed. The Report also indicated that leaving Site "D" in its natural state would be tolerated. Extremely minimal tolerance was shown for housing.

I am asking that Site "D" remain in its natural state, or be made a public park with potential for sports facilities.

Sincerely,
